

Online pushing

Go to link cloud.ibm.com
search for container registry
get started

go to command prompt:
ibmcloud login
email id : smartintern (webportal)
password : password (webportal)

type in the command prompt:

```
>>ibmcloud plugin install container-service
>>ibmcloud plugin install container-registry
>>ibmcloud plugin install observe-service
>>ibmcloud plugin install observe-service
>>ibmcloud plugin list
>>ibmcloud plugin install container-registry
>>ibmcloud login -a https://cloud.ibm.com
set region 4 th option japan
```

type this cmd

```
>>ibmcloud cr namespace-add <my_namespace>
>>ibmcloud cr login
>>docker tag rrdv/flask jp.icr.io/<my_namespace>/<my_repo>
```

and then go to search and find kubernetes services
change standard to free
-- create

and continue similiar like a kubernetes in local push document
